## LIGHT SELECTIVE CUTTING MEANS—

Frequent timber crops and regular cash returns from the land.

Less damage from wind and sleet.

Higher quality of timber products.

Faster growth—larger crops.

Ready cash to meet tax bills and other expenses.

---

---

*It Takes Trees to Make Timber*

## HEAVY DESTRUCTIVE CUTTING MEANS—

A long wait between timber harvests.

No crops—no cash; or slow growth—  
light crops!

Difficulty in getting new stands of  
young trees.

Little or no money for tax bills and  
improvements.
